NEW QUESTION: 1
Which two statements about HSRP are true? (Choose two.)
A. Load sharing with HSRP is achieved by creating HSRP groups on the HSRP routers.
B. Routers configured for HSRP must belong only to one group per HSRP interface.
C. Load sharing with HSRP is achieved by creating multiple subinterfaces on the HSRP routers.
D. All routers configured for HSRP load balancing must be configured with the same priority.

E. Routers configured for HSRP can belong to multiple groups and multiple VLANs.
Answer: A,E
Explanation:
HSRP is a Cisco-proprietary protocol developed to allow several routers (or multilayer switches) to appear as a single gateway address. RFC 2281 describes this protocol in more detail. Basically, each of the routers that provides redundancy for a given gateway address is assigned to a common HSRP group. One router is elected as the primary, or active, HSRP router, another is elected as the standby HSRP router, and all the others remain in the listen HSRP state. The routers exchange HSRP hello messages at regular intervals, so they can remain aware of each other's existence, as well as that of the active router.
An HSRP group can be assigned an arbitrary group number, from 0 to 255. If you configure HSRP groups on several VLAN interfaces, it can be handy to make the group number the same as the VLAN number. However, most Catalyst switches support only up to 16 unique HSRP group numbers. If you have more than 16 VLANs, you will quickly run out of group numbers. An alternative is to make the group number the same (that is, 1) for every VLAN interface. This is perfectly valid because the HSRP groups are only locally significant on an interface. HSRP Group 1 on interface VLAN 10 is unique from HSRP Group 1 on interface VLAN 11.

NEW QUESTION: 2
Sie verwalten eine Datenbank mit dem Namen DB1, die eine nicht partitionierte Tabelle enthält. Sie erstellen einen Index in der Tabelle.
Automatische Statistikaktualisierungen sind deaktiviert. Benutzer berichten, dass die Ausführung einiger SSRS-Abfragen (Microsoft SQL Server Reporting Service) lange dauert. Sie stellen fest, dass das Problem durch veraltete Statistiken für Index1 verursacht wird.
Sie müssen die Statistiken für den Index aktualisieren.
Was sollte man tun?
A. Führen Sie den Befehl UPDATE STATISTICS mit der Option COLUMNS aus.
B. Führen Sie die gespeicherte Systemprozedur sp_updatestats aus.
C. Setzen Sie den Wert der schreibgeschützten Datenbank-Eigenschaft auf True.
D. Setzen Sie den Wert der Eigenschaft Auto Create Incremental Statistics auf True.
Answer: A
Explanation:

Explanation
UPDATE STATISTICS updates query optimization statistics on a table or indexed view.
The ALL | COLUMNS | INDEX options update all existing statistics, statistics created on one or more columns, or statistics created for indexes. If none of the options are specified, the UPDATE STATISTICS statement updates all statistics on the table or indexed view.
Note: You can update query optimization statistics on a table or indexed view in SQL Server by using SQL Server Management Studio or Transact-SQL. By default, the query optimizer already updates statistics as necessary to improve the query plan; in some cases you can improve query performance by using UPDATE STATISTICS or the stored procedure sp_updatestats to update statistics more frequently than the default updates.
