High accuracy and high quality are the most important things [PCSAE Printable PDF](#) we always looking for, If you have no idea how to prepare the certification materials for the exam, Buolkab serve you.

NEW QUESTION: 1

DRAG DROP

Your company uses Microsoft Exchange Online. End users access their mailboxes by using Outlook Web App (OWA).

The company is deploying an end-user request process for new shared mailboxes. When a user requests a shared mailbox, a corresponding group must also be created. The requestor will manage the group membership in OWA to allow other users access to the shared mailbox.

You are creating a Windows PowerShell script to meet the following requirements:

- *Create a shared mailbox that has the requested display name and email address.

- *Create a group and make the requestor both the owner and a member of the group.

- *Assign full control for the shared mailbox to the group.

The script currently includes the following Windows PowerShell script segment:

You need to complete the Windows PowerShell script.

How should you complete the script? To answer, drag the appropriate cmdlets to the correct targets. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

The script asks the user for the following information: RequestorUPN, DisplayName, Alias and Domain.

The RequestorUPN is the name of the user requesting the mailbox. This value is stored in the \$requestorUPN variable.

The DisplayName is the display name of the mailbox. This value is stored in the \$displayname variable.

The Alias is the alias for the mailbox, for example: Jane.Doe. This value is stored in the \$Alias variable.

The domain is the domain required for the mailbox, for example: contoso.com. The value is stored in the \$domain variable.

The script uses the \$alias variable and the \$domain variable to construct an email address. For example: [\[email#160;protected\]](#)

This value is stored in the \$SmbName variable.

For the group information, the group display name is constructed from the \$displayname variable and "-group". This value is stored in the \$GroupDisplayName variable.

The group alias is constructed from the \$alias variable and "-group". This value is stored in the \$GroupAlias variable.

The group name is constructed from the \$GroupAlias variable and the \$domain variable. This value is stored in the \$GroupName variable.

Box 1: The New-Mailbox cmdlet is used to create a new mailbox. The values stored in the variables provide the information required to complete the command.

Box 2: The New-DistributionGroup cmdlet is used to create a new distribution group. The values stored in the variables provide the information required to complete the command.

Box 3: The Add-MailboxPermission cmdlet is used to assign the distribution group full control access to the shared mailbox. The values stored in the variables provide the information required to complete the command.

Box 4: The Add-DistributionGroupMember cmdlet is used to add the mailbox requestor to the distribution group. The values stored in the variables provide the information required to complete the command.

NEW QUESTION: 2

Which policy is used to capture host information on the Cisco Next Generation Intrusion Prevention System?

- A. Correlation
- B. Intrusion
- C. Access control
- D. Network discovery

Answer: D

NEW QUESTION: 3

ALTER FLASHBACK ARCHIVE fla1 MODIFY RETENTION 3 YEAR;

What is the implication of this command?

- A. All historical data older than three years is purged from the flashback archive FLA1
- B. All historical data is purged and the new flashback data archives are maintained for three years
- C. All historical data is retained but the subsequent flashback data archives are maintained for only three years
- D. The command produces an error because the retention time cannot be reduced

Answer: A

NEW QUESTION: 4

You work as a Network Administrator for www.company.com Inc. You have implemented the registry-based group policy on your network. Which of the following policies provides easy access points for users to rescope searches to the default Internet search engine from the Start Menu?

- A. Pin Internet search sites to the "Search again" links and the Start menu
- B. Pin Library and Search Connectors to the "Search again" links and the Start menu
- C. Add Search Internet link to the Start menu
- D. Disable Known Folders

Answer: C

Explanation:

The Add Search Internet link to the Start menu policy provides easy access points for users to re- scope searches to the default Internet search engine from the Start Menu. answer D is incorrect. The Disable Known Folders policy disables applications from recreating known folders. answer C is incorrect. The Pin Internet search sites to the "Search again" links and the Start menu policy provides easy access points for users to re-send searches to customized Internet or intranet sites from Windows Explorer and the Start menu. answer B is

incorrect. The Pin Library and Search Connectors to the "Search again" links and the Start menu policy provides easy access points for users to re-scope searches to customized Library or Search Connector locations from Windows Explorer and the Start menu.
