These formats are supported in the lists of paths to purge:

Single path purge: Purge individual assets by specifying the full path of the asset (without the protocol and domain), with the file extension, for example, `/pictures/strasbourg.png`;
Wildcard purge: Asterisk (*) may be used as a wildcard. Purge all folders, subfolders, and files under an endpoint with `/*` in the path or purge all subfolders and files under a specific folder by specifying the folder followed by `/*`, for example, `/pictures/*`.

Root domain purge: Purge the root of the endpoint with `/"` in the path.
