NS0-184 All of that, in addition to the special NetApp Certified Storage Installation Engineer, ONTAP discounts on NetApp Certified Storage Installation Engineer, ONTAP NS0-184 bundle purchases that are our unique feature!

NEW QUESTION: 1

How should you design the mailbox servers that run Exchange 2000 Server at headquarters to fulfill recovery requirements?

A. Use one Exchange 2000 Server computer.

Create two storage groups that contain four mailbox stores. Back up each mailbox store, and purge the transaction logs.

B. Use two Exchange 2000 Server computers.

On each of these servers, create one storage group that contains five mailbox stores.

Back up the storage group, and purge the transaction logs.

C. Use one Exchange 2000 Server computer.

Create one storage group that contains four mailbox stores. Back up the storage group, and purge the transaction logs.

D. Use two Exchange 2000 Server computers.

On each of these servers, create four storage groups that each contains one mailbox store.

Back up each mailbox store, and purge the transaction logs.

Answer: B

Explanation:

The creation of each store group is processor intensive resource in that way we need just to create the necessary storage group. By definition in Exchange Enterprise version you can create four storage groups and each storage group can contain 5 mailbox stores.

They tell us that each server in headquarters have 1,000 mailbox enabled users, in this way they have in total 5,000 mailbox enabled users that must be split in the proposed solutions. The best proposal answer is C, because they tell us that if they servers fail do not must affect to more than 500 users, this mean two servers, 2500 users per server 500 mailbox user per mailbox store we achieve the require solution

NEW QUESTION: 2

You have defined Essbase properties for the First entity, E01. You would now like to apply those same values to the remaining entity list including siblings and descendants. What are two ways to complete this step?

- A. Using the Copy/Put Properties feature for the siblings and descendants of E01
- B. Using the Model After feature in an import script
- C. Changing the properties to turn on inheritance
- D. Using the Model After feature in DRM for each new entity
- E. Using the Match feature in DRM

Answer: D,E

NEW QUESTION: 3

A retail company's data analytics team recently created multiple product sales analysis dashboards for the average selling price per product using Amazon QuickSight. The dashboards were created from .csv files uploaded to Amazon S3. The team is now planning to share the dashboards with the respective external product owners by creating individual users in Amazon QuickSight. For compliance and governance reasons, restricting access is a key requirement. The product owners should view only their respective product analysis in the dashboard reports.

Which approach should the data analytics team take to allow product owners to view only their products in the dashboard?

- A. Separate the data by product and use S3 bucket policies for authorization.
- B. Create a manifest file with row-level security.
- C. Create dataset rules with row-level security.
- D. Separate the data by product and use IAM policies for authorization.

Answer: D

NEW QUESTION: 4

What is the maximum number of nodes a NAS cluster can have?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4
- F. 5
- G. 6

Answer: A

Explanation:

ce:
<http://www.netapp.com/in/communities/tech-ontap/tot-clustermode-1207.aspx> (scalability and performance, first sentence)
