NEW QUESTION: 1
Your company has two offices. The offices are located in New York and Tokyo.
You have an Exchange Server 2013 organization.
You have the following Unified Messaging (UM) dial plans:
Tokyo Dial Plan

New York Dial Plan

A user named User 1 has a mailbox that is associated with the New York Dial Plan. User 1 frequently works from both the New York and the Tokyo offices.
You need to add an extension from the Tokyo office to the account of User1.
Which cmdlet should you run?
A. Set-UMDialPlan
B. Set-UMMailbox
C. Set-Mailbox
D. Set-UMMailboxPolicy
Answer: A
Explanation:
Explanation/Reference:
Explanation:
Use the Set-UMDialplan cmdlet to set various properties on a

Unified Messaging (UM) dial plan.
The Extension parameter specifies the extension number used by the Call Someone feature when a call is transferred.

NEW QUESTION: 2
Which storage solution is the default value in the NetApp Interoperability Matrix Tool (IMT) for this mandatory search criterion?
A. software
B. protocols
C. SAN
D. NAS
Answer: C

NEW QUESTION: 3
You need to implement the code flow strategy for Project2 in Azure DevOps.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange in the correct order.

Answer:
Explanation:

Explanation

Step 1: Create a repository
A Git repository, or repo, is a folder that you've told Git to help you track file changes in. You can have any number of repos on your computer, each stored in their own folder.
Step 2: Create a branch
Branch policies help teams protect their important branches of development. Policies enforce your team's code quality and change management standards.
Step 3: Add a build validation policy
When a build validation policy is enabled, a new build is queued when a new pull request is created or when changes are pushed to an existing pull request targeting this branch. The build policy then evaluates the results of the build to determine whether the pull request can be completed.
Scenario:
Implement a code flow strategy for Project2 that will:
Enable Team2 to submit pull requests for Project2.
Enable Team2 to work independently on changes to a copy of Project2.
Ensure that any intermediary changes performed by Team2 on a

copy of Project2 will be subject to the same restrictions as the ones defined in the build policy of Project2.

NEW QUESTION: 4
Which option describes the possible result of a customer configuring a server pool that contains Cisco UCS B200 M2 and B250 M2 blades?
A. After service profile migration, the server fails in boot from SAN due to differences in PCI device IDs.
B. You must decommission a blade server for the associated service profile to migrate to another blade in the server pool successfully.
C. A service profile cannot migrate automatically from one blade to another blade within the server pool due to hardware failure.
D. You must uncheck the Restrict Migration box in the service profile to allow service profile migration between blades in the server pool.
Answer: A
