Money back guarantee: We make your money count by seeing you through to success.

**NEW QUESTION: 1**

- A. Option B
- B. Option D
- C. Option C
- D. Option A

**Answer: B,D**

**NEW QUESTION: 2**

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server 1. Server1 runs Windows Server 2012.

You need to create 3-TB virtual hard disk (VHD) on Server1. Which tool should you use?

- A. New-StorageSubsystemVirtualDisk
- B. Computer Management
- C. Share and Storage Management
- D. File Server Resource Manager (FSRM)

**Answer: C**

Explanation:

With Share and Storage Management, you can provision storage on disks that are available on your server, or on storage subsystems that support Virtual Disk Service (VDS). The Provision Storage Wizard guides you through the process of creating a volume on an existing disk, or on a storage subsystem attached to your server. If the volume is going to be created on a storage subsystem, the wizard will also guide you through the process of creating a logical unit number (LUN) to host that volume. You also have the option of only creating the LUN, and using Disk Management to create the volume later.

Incorrect: Not D: File Server Resource Manager is a suite of tools for Windows Server that allows administrators to understand, control, and manage the quantity and type of data that is stored on their servers. By using File Server Resource Manager, administrators can place quotas on folders and volumes, actively screen files, and generate comprehensive storage reports. This set of advanced instruments not only helps the administrator efficiently monitor existing storage resources, but it also aids in the planning and implementation of future policy changes.
