NEW QUESTION: 1

What does UDoctor analyze to determine if an alert needs to be dialed home to EMC?

- A. Array Issues Summary
- B. Event XML file
- C. Array Configuration Report
- D. SPCollect files

Answer: B

NEW QUESTION: 2

Your management has asked you to project your anticipated virtual machine storage needs over the next 18 months. Which technology would help provide the required information?

- A. vCenter Site Recovery Manager
- B. vCenter Update Manager
- C. vCenter Configuration Manager
- D. vCenter Operations Manager

Answer: D

NEW QUESTION: 3

Assuming the port statements are correct, which two (three?) code fragments create a one-byte file?

- A.

```
OutputStream fos = new FileOutputStream (new File
("/tmp/data.bin"));
DataOutputStream dos = new DataOutputStream(fos);
dos.writeByte(0);
dos.close();
```
- B.

```
OutputStream fos = new FileOutputStream(new
File("/tmp/data.bin"));
```

```
OutputStream bos = new BufferedOutputStream(fos);
DataOutputStream dos = new DataOutputStream(bos);
dos.writeByte(0);
dos.close();
```

```
C. OutputStream fos = new FileOutputStream ("/tmp/data.bin");
DataOutputStream dos = new DataOutputStream(fos);
dos.writeByte(0);
dos.close();
```

```
D. OutputStream fos = new FileOutputStream ("/tmp/data.bin");
fos.writeByte(0);
fos.close();
```

Answer: A,B,C

Explanation:

```
B:Create DataOutputStream from FileOutputStream public static
void main(String[] args)
```

throws

```
Exception { FileOutputStream fos = new FileOutputS
tream("C:/demo.txt");
```

```
DataOutputStream dos = new
```

```
DataOutputStream(fos);
```

Note:

The FileOutputStream class is a subclass of OutputStream. You can construct a

FileOutputStream object by

passing a string containing a path name or a File object.

You can also specify whether you want to append the output to an existing file.

```
public FileOutputStream (String path)
```

```
public FileOutputStream (String path, boolean append)
```

```
public FileOutputStream (File file)
```

```
public FileOutputStream (File file, boolean append)
```

With the first and third constructors, if a file by the specified name already exists, the file

will be overwritten. To append to an existing file, pass true to the second or fourth

constructor.

Note 2:public class DataOutputStreamextends

FilterOutputStreamimplements DataOutput

A data output stream lets an application write primitive Java data types to an output stream

in a portable way.

An application can then use a data input stream to read the data back in.

Reference:java.io Class DataOutputStream
