NEW QUESTION: 4

Which of the following is used by the recipient of a digitally signed email to verify the identity of the sender?

A. Sender's private key

B. Sender's public key

C. Recipient's private key

D. Recipient's public key

Answer: B

Explanation:

Section: Compliance and Operational Security

Explanation/Reference:

Explanation:

When the sender wants to send a message to the receiver, it's important that this message not be altered.

The sender uses the private key to create a digital signature.

The message is, in effect, signed with the

private key. The sender then sends the message to the receiver. The recipient uses the public key

attached to the message to validate the digital signature. If

the values match, the receiver knows the

message is authentic. Thus, the recipient uses the sender's

public key to verify the sender's identity.
