NEW QUESTION: 3
Which command creates a new SyncMirror aggregate, letting Data
ONTAP select the disk drives?
A. aggr create aggrX -d 12
B. aggr mirror aggrX -m 12
C. aggr mirror aggrX -n 12
D. aggr create aggrX -m 12

Answer: D
Explanation:
https://library.netapp.com/ecmdocs/ECMP1196890/html/man1/na_agg
r.1.html The following commands are available in the aggr
suite:

If you use the -d disk1 [disk2 ...] argument, the node
creates the aggregate with the specified spare disksdisk1,
disk2, and so on. You can specify a space-separated list of
disk names. Two separate lists must bespecified if the new
aggregate is mirrored. In the case that the new aggregate is
mirrored, the indicated disksmust result in an equal number of
disks on each new plex.
The disks in a plex are not permitted to span spare pools. This
behavior can be overridden with the -f option.
The same option can also be used to force using disks that do
not have matching rotational speed. The-foption has effect only
when used with the -d option specifying disks to use.
The -m option can be used to specify that the new aggregate be
mirrored (have two plexes) upon creation. Ifthis option is
given, then the indicated disks will be split across the two
plexes. By default, the new aggregatewill not be mirrored.
aggr mirror aggrname The -n option can be used to display the
command that the system will execute without actually making
anychanges. This is useful for displaying the automatically
selected disks, for example.

NEW QUESTION: 4
You deploy Azure service by using Azure Resources Manager
templates. The template reference secrets are stored in Azure
key Vault.
You need to recommend a solution for accessing the secrets
during deployments.
The solution must prevent the users who are performing the
deployments from accessing the secrets in the key vault
directly.
What should you include in the recommendation? To answer,
select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:
Explanation:

Explanation

Box 1: An advanced access policy for the key vaults
Enable template deployment
* In the portal, select your Key Vault.
* Select Access policies.
* Select access policies
* Select Click to show advanced access policies.

* Show advanced access policies
* Select Enable access to Azure Resource Manager for template deployment. Then, select Save.
Box 2: Role-based access control (RBAC)
In large teams you may have multiple people deploying resources but don't want to give them access to the actual secrets inside the vault. You can achieve this by creating a custom role that only gives access to the KeyVault for deployment purposes. The deployment user cannot read the secrets within.
