**Answer: B**  
 Explanation:  
 With AWS IAM a user is creating an application which runs on an EC2 instance and makes requests to AWS, such as DynamoDB or S3 calls. Here it is recommended that the user should not create an IAM user and pass the user's credentials to the application or embed those credentials inside the application. Instead, the user should use roles for EC2 and give that role access to DynamoDB/S3. When the roles are attached to EC2, it will give temporary security credentials to the application hosted on that EC2, to connect with DynamoDB/S3.

**NEW QUESTION: 3**  
 Northern Trail Outfitters is using a mobile campaign to collect email addresses of interested subscribers. Using AMPScript's API functions they will send a confirmation email when an email is texted into their short code.
