NEW QUESTION: 1

A. Option D
B. Option B
C. Option A
D. Option C
Answer: A
Explanation:
Topic 5, Contoso Ltd
Overview
Contoso, Ltd. is a manufacturing company that has 3,000 users. Contoso has a data center in Toronto and 20 offices across Canada. The offices connect to
each other by using a WAN link. Each office connects directly to the Internet.
Existing Environment
Active Directory Environment
The network contains an Active Directory forest named contoso.com. The forest contains a single domain. All domain controllers run Windows Server 2012. All servers run Windows Server 2008 R2.
Each office contains three domain controllers. Each office is configured as an Active Directory site.
System Center 2012 Infrastructure
Contoso has a System Center 2012 infrastructure that contains 11 servers. The servers are configured as shown in the

following table.

Contoso has a private cloud named Cloud1. Cloud1 is managed by using VMM. The
following applications run in Cloud 1:
Microsoft Exchange Server 2010
Microsoft SharePoint Server 2010
A custom manufacturing application named App1
The Hyper-V hosts are managed by using VMM. TOR-H01 and TOR-H02 are nodes in a failover cluster.
The switches that are part of the network fabric are from various manufacturers and are managed by using SNMPv3.

App1
An application named App1 is deployed from a VMM service template that consists of one front-end web server and one back-end database server. App1 processes credit card information. The instance of App1 running in the data center uses two virtual machines named VM1 and VM2. TOR-H01 hosts VM1 and VM2.
App1 is managed by using a custom management pack named MP1. The management pack used to monitor App1 contains a distributed application diagram named App1DAD.
The service level agreement (SLA) for App1 states that App1 must be available 99 percent of the time.

Problem Statements
Contoso identifies the following issues:
- Currently, all Operations Manager alerts are sent by email only. Database administrators require alerts to be sent by text message. The cell phone numbers of the database administrators are already configured in Operations Manager.
- Administrators report that the processor performance counters for the Hyper-V hosts display values that are lower than the actual load on the hosts.

Requirements
Business Goals
Contoso wants to minimize hardware and software costs, whenever possible.

Planned Changes
Contoso plans to add a new web server to the App1 service template. Traffic to the new web server will be load balanced with the existing web server by using a hardware load balancer.

Technical Requirements
Contoso identifies the following technical requirements for the planned deployment: - Automatically apply software updates issued by Microsoft to all of the Hyper-V hosts. - Automatically assign incidents to administrators when a Configuration Manager service fails.
- Ensure that the Exchange Server administrators can request that new virtual machines be added to the Exchange Server organization by using Internet Explorer.
- Monitor the uptime of all the Hyper-V hosts and all the virtual machines by using Operations Manager and VMM.

Performance and Resource Optimization (PRO)enabled management packs will be used.
- Ensure that users have a self-service portal that provides them with the ability to back up individual virtual machines. Users must receive an email message confirming that the backup is complete.
- Ensure that database administrators are alerted by a text message when an error occurs on a server that they manage. The text messages should be delivered regardless of the current network conditions.
- Network administrators report that they currently use different tools to monitor the port status on the switches. The network administrators want to manage all of the switches by using Operations Manager.
App1 Requirements
Contoso identifies the following requirements for App1: - Create an object in the App1 management pack to track the SLA.
- Ensure that multiple monitoring thresholds can be used for different instances of App1.
- Ensure that App1 complies with the Payment Card Industry Data Security Standard (PCI DSS).

NEW QUESTION: 2
You need to plan the migration of App1. What should you do?
A. Install App1 on drive C Move all of the data that supports App1 to drive D.
B. Install App1 on drive C Move all of the data that supports App1 to an additional data drive.
C. Install App1 on drive D Move all of the data that supports App1 to an additional data drive.
D. Expand the size of drive C Install App1 and all of the data that supports the app on drive C
Answer: D
Explanation:
Explanation/Reference:
Best practice would suggest that Answer C is correct. However, the only requirement that relates to this question is, "The amount of disk space that is used by Windows Azure must be minimized." Therefore, the answer must be B.
This is the only solution that eliminates the unused space on the three existing disks.

NEW QUESTION: 3
Why might an organizational unit fall into the Unallocated category?
There are 2 correct answers to this question.
A. The organizational unit is NOT found in the customer's source table
B. The organizational unit has been identified

C. The organizational unit is inactive
D. The organizational unit is linked to an active parent in the structure
Answer: A,C

NEW QUESTION: 4
A media customer has several thousand amazon EC2 instances in an AWS account. The customer is using a Slack channel for team communications and important updates. A DevOps Engineer was told to send all AWS-scheduled EC2 maintenance notifications to the company Slack channel. Which method should the Engineer use to implement this process in the LEAST amount of steps?
A. Integrate AWS Support with AWS CloudTrail. Based on the CloudTrail lookup event created, the event can invoke an AWS Lambda function to pass EC2 maintenance notifications to the Slack channel.
B. Integrate AWS Trusted Advisor with AWS Config. Based on the AWS Config rules created, the AWS Config event can invoke an AWS Lambda function to send notifications to the Slack channel.
C. Integrate AWS Personal Health Dashboard with Amazon CloudWatch Events. Based on the CloudWatch Events created, the event can invoke an AWS Lambda function to send notifications to the Slack channel.
D. Integrate EC2 events with Amazon CloudWatch monitoring. Based on the CloudWatch Alarm created, the alarm can invoke an AWS Lambda function to send EC2 maintenance notifications to the Slack channel.
Answer: C
