As your infrastructure grows, common patterns can emerge in
which you declare the same components in each of your
templates. You can separate out these common components and
create dedicated templates for them.
That way, you can mix and match different templates but use
nested stacks to create a single, unified stack.
Nested stacks are stacks that create other stacks. To create
nested stacks, use the AWS:: Cloud Form ation::Stackresource in
your template to reference other templates. For more
