NEW QUESTION: 2

Which component of ITIL pertains to planning, coordinating, executing, and validating changes and rollouts to production environments?

- A. Problem management
- B. Change management

C. Availability management

D. Release management

Answer: D

Explanation:

Explanation

Release management involves planning, coordinating, executing, and validating changes and rollouts to the production environment. Change management is a higher-level component than release management and also involves stakeholder and management approval, rather than specifically focusing the actual release itself.

Availability management is focused on making sure system resources, processes, personnel, and toolsets are properly allocated and secured to meet SLA requirements. Problem management is focused on identifying and mitigating known problems and deficiencies before they occur.

NEW QUESTION: 3

You are a program manager. You use Project Server 2013 and Project Professional 2013 to manage your portfolio which includes master projects and sub-projects.
