NEW QUESTION: 1
Which protocols use encryption to protect the confidentiality
of data transmitted between two parties?
(Choose two.)
A. Telnet
B. FTP
C. AAA
D. HTTPS
E. SSH
F. HTTP
Answer: D,E
Explanation:
+ Secure Shell (SSH) provides the same functionality as Telnet,
in that it gives you a CLI to a router or switch; unlike
Telnet, however, SSH encrypts all the packets that are used in
the session.
+ For graphical user interface (GUI) management tools such as
CCP, use HTTPS rather than HTTP because, like SSH, it encrypts
the session, which provides confidentiality for the packets in
that session.
