- D. é«~å°|ãªè"...ã"•ã¾ç--ã, 'ç,, |ãŠ¹ã•«ã•™ã, <

Answer: A

NEW QUESTION: 4

You have an Azure subscription that contains the resources shown in the following table.

You need to deploy a load-balancing solution for two Azure web apps named App1 and App2 to meet the following requirements:

- * App1 must support command injection protection.
- * App2 must be able to use a static public IP address.
- * App1 must have a Service Level Agreement (SLA) of 99.99 percent.

Which resource should you use as the load-balancing solution for each app? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:
Explanation:

Explanation

Box 1: AGW1

Azure Application Gateway offers a web application firewall (WAF) that provides centralized protection of your web applications from common exploits and vulnerabilities. Web applications are increasingly targeted by malicious attacks that exploit commonly known vulnerabilities. SQL injection and cross-site scripting are among the most common attacks.

Box 2: ELB1

Public IP addresses allow Internet resources to communicate inbound to Azure resources. Public IP addresses also enable Azure resources to communicate outbound to Internet and public-facing Azure services with an IP address assigned to the resource.

Note: In Azure Resource Manager, a public IP address is a resource that has its own properties. Some of the resources you can associate a public IP address resource with are:

- * Virtual machine network interfaces
- * Internet-facing load balancers
- * VPN gateways
- * Application gateways
