- C. Managed and Measurable
- D. Repeatable but Intuitive

Answer: B

Explanation:

Defined (level 3) is the lowest level at which an IT balanced scorecard is defined.

NEW QUESTION: 2

When saving a search directly to a dashboard panel instead of saving as a report first, which of the following is created?

- A. Prebuilt panel
- B. Cloned panel
- C. Report panel
- D. Inline panel

Answer: C

NEW QUESTION: 3

Which three are true regarding the Enterprise Manager Cloud Control Data Guard configuration verification wizard? (Choose three.)

- A.** It checks that supplemental logging is turned on if there is a logical standby database in the configuration.
- B.** It modifies the database configurable parameters to match the values set for the broker configuration.
- C.** It generates a workload on the primary database causing log switching, and monitors the arrival rate of redo on the standby database.
- D.** It verifies that parameter settings in the SPFILE or in memory or both, are consistent with the broker configuration properties for that database.
- E.** It checks that the current data protection level is consistent with the broker's configured data protection mode.

Answer: A,D,E

Explanation:

Explanation

Usually Data Guard configuration verification is kind of health check of Data Guard, it does many things like performing complete health check, verifying the FSFO status, determination of protection mode, availability of standby redo log files, Data Guard status whether valid or not, After the log switch whether the sequence is shipping to standby or not and Data Guard properties. To initiate Data Guard verification
