Answer: C
Explanation:
Explanation
With the DeletionPolicy attribute you can preserve or (in some
cases) backup a resource when its stack is deleted. You specify
a DeletionPolicy attribute for each resource that you want to
control. If a resource has no DeletionPolicy attribute, AWS
CloudFormation deletes the resource by default. To keep a

resource when its stack is deleted, specify Retain for that resource. You can use retain for any resource. For example, you can retain a nested stack, Amazon S3 bucket, or EC2 instance so that you can continue to use or modify those resources after you delete their stacks.
