**NEW QUESTION: 3**

- A. expire\_nodest\_conn
- B. expire\_curr\_conn
- C. drop\_entry
- D. drop\_curr\_conn

**Answer: A**

**NEW QUESTION: 4**

- A. Option D

- B. Option B
- C. Option C
- D. Option A

**Answer: B,D**

Explanation:

Explanation

You can use the Powercfg.exe tool to control power settings and configure computers to default to Hibernate or Standby modes. In this question, we use POWERCFG /X on one help desk computer to modify the power scheme to meet our requirements. After configuring the required settings, we can export the power scheme settings to a file by using POWERCFG /EXPORT. We can then import the power scheme from the file on each of the remaining help desk computers by using POWERCFG /IMPORT. After importing the power scheme on the remaining computers, we need to set the new power scheme to be the active power scheme by using POWERCFG /S.
