NEW QUESTION: 1

To address a maintenance problem, a vendor needs remote access to a critical network. The MOST secure and effective solution is to provide the vendor with a:

- A. dial-in access.
- B. virtual private network (VPN) account for the duration of the vendor support contract.
- C. two-factor authentication mechanism for network access.
- D. Secure Shell (SSH-2) tunnel for the duration of the problem.

Answer: D

Explanation:

For granting temporary access to the network, a Secure Shell

(SSH-2) tunnel is the best approach. It has auditing features and allows restriction to specific access points. Choices B, C and D all give full access to the internal network. Two-factor authentication and virtual private network (VPN) provide access to the entire network and are suitable for dedicated users. Dial-in access would need to be closely monitored or reinforced with another mechanism to ensure authentication to achieve the same level of security as SSH-2.

NEW QUESTION: 2

You want to write a custom widget that allows input of Incident Custom Fields that has both required and nonrequired fields. Identify the correct method using the Connect for PHP API to determine which fields are required when saving an existing incident.

- A. Make a call to the `RNCPHPMncident: :getRequired()` static method to inspect the `is_required_for_update` constraint of each custom field.
- B. Use ROQL to query the incident and look at the constraint of each custom field to see if `is_required_for_save` IS set to true.
- C. Use ROQL to fetch the incident and inspect constraints to see if `is_required_for_save` is set to true.
- D. Make a call to the `rncphp\incident: :getMetadata()` static method to inspect the `is_recfu.ireci_for_upcia.te` constraint of each custom field.

Answer: B
