NEW QUESTION: 2
You have an Exchange Server organization that contains five
Servers. The Servers are configured as shown in the following
table.

You deploy Microsoft Lync Server 2010. You need to create a
Lync Server SIP Unified Messaging (UM) Dial Plan to enable
voice integration between Lync Server and Exchange Server.
Which three Exchange Servers should you associate to the UM
Dial Plans?
(Each correct answer presents part of the solution. Choose
three.)
A. Server1
B. Server5
C. Server3
D. Server2
E. Server4
Answer: A,B,D

NEW QUESTION: 3
Which option for the use of the AWS Key Management Service
(KMS) supports key management best practices that focus on
minimizing the potential scope of data exposed by a possible
future key compromise?
A. Change the CMK permissions to ensure that individuals who
can provision keys are not the same individuals who can use the
keys.
B. Change the CMK alias every 90 days, and update key-calling
applications with the new key alias.
C. Generate a new Customer Master Key (CMK), re-encrypt all
existing data with the new CMK, and use it for all future

encryption operations.
D. Use KMS automatic key rotation to replace the master key, and use this new master key for future encryption operations without re-encrypting previously encrypted data.
Answer: C
Explanation:
"automatic key rotation has no effect on the data that the CMK protects. It does not rotate the data keys that the CMK generated or re-encrypt any data protected by the CMK, and it will not mitigate the effect of a compromised data key. You might decide to create a new CMK and use it in place of the original CMK. This has the same effect as rotating the key material in an existing CMK, so it's often thought of as manually rotating the key."
