NEW QUESTION: 1

A plan under which employees of state and local governments can contribute part of their salaries such that those earnings will grow tax-deferred until retirement is called a:

- A. profit-sharing plan.
- B. Section 501 plan.
- C. money purchase plan.
- D. Section 457 plan.

Answer: D

Explanation:

A plan under which employees of state and local governments can contribute part

of their salaries such that those earnings will grow tax-deferred until retirement is called a Section 457 plan. Profit-sharing and money purchase plans are retirement plans that may be available to employees of for-profit companies. Section 501 of the IRS code covers non-profit corporations.

NEW QUESTION: 2

Hinweis: Diese Frage ist Teil einer Reihe von Fragen, die dasselbe Szenario darstellen. Jede Frage in der Reihe enthält eine eindeutige Lösung. Stellen Sie fest, ob die Lösung die festgelegten Ziele erfüllt.

Sie verwalten eine Microsoft SQL Server-Umgebung mit mehreren Datenbanken.

Sie müssen sicherstellen, dass Abfragen statistische Daten verwenden und keine Werte für lokale Variablen initialisieren.

Lösung: Sie aktivieren die Option PARAMETER_SNIFFING für die Datenbanken.

Entspricht die Lösung dem Ziel?

- A. Ja
- B. Nein

Answer: A

Explanation:

PARAMETER_SNIFFING = { ON | OFF | PRIMARY} enables or disables parameter sniffing. This is equivalent to Trace Flag 4136.

SQL server uses a process called parameter sniffing when executing queries or stored procedures that use parameters.

During compilation, the value passed into the parameter is evaluated and used to create an execution plan. That value is also stored with the execution plan in the plan cache. Future executions of the plan will re-use the plan that was compiled with that reference value.

NEW QUESTION: 3

You are creating a class library that will be used in a web application.

You need to ensure that the class library assembly is strongly named.

What should you do?

- A. Use the gacutil.exe command-line tool.
- B. Use assembly attributes.
- C. Use the aspnet_regiis.exe command-line tool.
- D. Use the xsd.exe command-line tool.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

The Windows Software Development Kit (SDK) provides several ways to sign an assembly with a strong name:

Using the Assembly Linker (Al.exe) provided by the Windows SDK.

Using assembly attributes to insert the strong name information in your code. You can use either the

AssemblyKeyFileAttribute or the AssemblyKeyNameAttribute, depending on where the key file to be used is located.

Using compiler options such /keyfile or /delaysign in C# and Visual Basic, or the /KEYFILE or /

DELAYSIGN linker option in C++. (For information on delay signing, see Delay Signing an Assembly.)

Note:

A strong name consists of the assembly's identity-its simple text name, version number, and culture information (if provided)-plus a public key and a digital signature. It is generated from an assembly file (the file that contains the assembly manifest, which in turn contains the names and hashes of all the files that make up the assembly), using the corresponding private key. Microsoft® Visual Studio® .NET and other development tools provided in the .NET Framework SDK can assign strong names to an assembly.

Assemblies with the same strong name are expected to be identical.

NEW QUESTION: 4

What are the advantages of variable extent size support for large ASM files? (Choose two.)

- A.** It improves performance in the extended cluster configuration by reading from a local copy of an extent.
- B.** It improves resync operations when the disk comes online after being taken offline for maintenance purposes.
- C.** Fewer extent pointers are needed to describe the file and less memory is required to manage the extent maps in the shared pool.
- D.** This feature enables faster file opens because of the reduction in the amount of memory that is required to store file extents.

Answer: C,D
