NEW QUESTION: 1
Which is used in the calculation of 'inherent' risk exposure?
A. Proximity of a risk before risk response actions are implemented
B. Effect on objectives if a risk occurs after completed risk response actions
C. Likelihood of a secondary risk occurring
D. Probability of a risk before risk response actions are implemented
Answer: D

NEW QUESTION: 2
What would the file permission example "rwsr-sr-x" translate to in absolute mode?
A. 0
B. 1
C. 2
D. 3
Answer: D

NEW QUESTION: 3

A. Option A
B. Option B
C. Option C
D. Option D
Answer: C
Explanation:
SDM Template Notes: - All templates are predefined.
There is no way to edit template category individual values.
- The switch reload is required to use a new SDM template. - The ACL merge algorithm, as opposed to the original access control entries (ACEs) configured by the user, generate the number of TCAM entries listed for security and QoS ACEs.
- The first eight lines (up to Security ACEs) represent approximate hardware boundaries set when a template is used.
If the boundary is exceeded, all processing overflow is sent to the CPU which can have a major impact on the performance of the switch.
Choosing the VLAN template will actually disable routing (number of entry for unicast or multicast route is zero) in hardware.
