Many of them remain allusive particularly to those [C THR81 2105 Study Plan](#) who do not have a comprehensive knowledge and the hands-on practice of the relevant fields, Be assured to choose Buolkab efficient exercises right now, and you will do a full preparation for RedHat certification EX447 exam.

It is EX447 exam qualification certification that gives you capital of standing in society and serving your company, is it because you were in a hurry to pick the answer, you did not understand the concept, or you did not remember it.

It has the functions of simulating examination, limited-timed examination and online error correcting, It is easy and fast to download the free trial version of our EX447 exam braindumps.

NEW QUESTION: 1

Your network contains an Active Directory domain named adatum.com.

You discover that when users join computers to the domain, the computer accounts are created in the Computers container.

You need to ensure that when users join computers to the domain, the computer accounts are automatically created in an organizational unit (OU) named All_Computers.

What should you do?

- A. From a command prompt, run the redircmp.exe command.
- B. From Ldp, configure the properties of the Computers container.
- C. From ADSI Edit, configure the properties of the OU1 object.
- D. From ADSI Edit, configure the properties of the Computers container.
- E. From Windows PowerShell, run the Move-ADObject cmdlet.

Answer: A

Explanation:

Explanation/Reference:

Explanation:

This command redirects the default container for newly created computers to a specified, target organizational unit (OU) so

that newly created computer objects are created in the specific target OU instead of in All_Computers.

NEW QUESTION: 2

You are developing a SQL Server Integration Services (SSIS) project by using the Project Deployment Model. The project is deployed to a single SSIS catalog, and transfers data to and from multiple databases hosted on SQL Server. The project must be configured to be able to export data to and from five different production servers that run SQL Server 2012. Each target server requires different values for connection strings and parameters in the SSIS project. You need to meet the requirements by using the least amount of administrative effort.

What should you do?

- A.** For each target server, create separate registry entry configurations. Select the registry entry at package execution time.
- B.** For each target server, create separate Environments in the SSIS catalog of the host SQL Server SSIS instance. Select the appropriate Environment at package execution time.
- C.** Create one SSIS catalog Environment. Change the values of each Environment variable at package execution time.
- D.** For each target server, create a separate XML configuration file. Select the XML configuration file at package execution time.

Answer: B

NEW QUESTION: 3

Annual inventory holding costs equal:

- A.** US \$1,250
- B.** US \$1,750
- C.** US \$750
- D.** US \$2,250

Answer: B

Explanation:

Given that demand is constant and the EOQ is 2,500 units, the average inventory level-1 without regard to safety stock is 1,250 units $(2,500 - 2)$. Adding safety stock results in an average level of 1,750 units $(1,250 + 500)$. Given also that annual holding costs are 25% of average inventory and that unit cost is US \$4, total annual holding cost is US \$1,750 $[(1,750 \text{ units} : \$4) 25\%]$. Using an EOQ analysis assuming a constant demand, it is determined that the optimal order quantity is 2,500. The company desires a safety stock of 500 units. A five day lead time is needed for delivery. Annual inventory holding costs equal 25% of the average inventory level. It costs the

company US \$4 per unit to buy the product, which it sells for US \$8. It costs the company US \$150 to place a detailed order, and the monthly demand for the product is 4,000 units.
