Answer: A

NEW QUESTION: 3

A. Option C
B. Option A
C. Option B
D. Option D
E. Option E
Answer: B,D

NEW QUESTION: 4
Your network contains an Active Directory domain named
contoso.com. The domain contains a server named Server1 that
runs Windows Server 2008 R2.
You plan to test Windows Server 2012 R2 by using native-boot
virtual hard disks (VHDs).
You have a Windows image file named file1.wim.
You need to add an image of a volume to file1.wim.
What should you do?
A. Run dism.exe and specify the /
B. Run imagex.exe and specify the /append parameter.
C. Run imagex.exe and specify the /export parameter.
D. Run dism.exe and specify the /
Answer: A
Explanation:
Explanation:
Explanation
The Deployment Image Servicing and Management (DISM) tool is a
command-line tool that enables the creation of Windows image
(.wim) files for deployment in a manufacturing or corporate IT
environment.
The /Append-Image option appends a volume image to an existing
.wim file allowing you to store many customized Windows images
in a fraction of the space. When you combine two or more
Windows image files into a single .wim, any files that are
duplicated between the images are only stored once.
Incorrect:
Not A, not B: ImageX has been flagged by Microsoft as a
deprecated utility, and has been replaced with DISM Reference:
Append a Volume Image to an Existing Image Using DISM
