NEW QUESTION: 1
Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment. The customer previously installed all applications locally on managed laptops and desktops but is willing to evaluate other application delivery methods as part of the new deployment. The environment will be standardized on Windows 10 and Windows Server 2016 for the Virtual Delivery Agent (VDA) machines.
As part of an application analysis performed earlier in the project, the information in the Exhibit was collected regarding one of the required applications.
Click the Exhibit button to view the information.

The customer has an additional objective to minimize the number of images that must be managed.
How should the architect install the application?
A. Stream it to a VDA machine using Microsoft App-V and accessed through a virtual desktop session
B. On an Application Layer using Citrix App Layering, be included in a layered image, and accessed through a virtual desktop session
C. Directly on a Server OS VDA machine and accessed from the endpoint as a published application
D. On an Application Layer using Citrix App Layering then be presented to assigned users as an Elastic Layer during a virtual desktop session
E. Directly on endpoint devices and included in a virtual desktop session using the Local App Access feature
