NEW QUESTION: 1

In Oracle 10g, a tablespace SYSAUX is created automatically by the installation tool SAPINST. Which of the following statements is true? (Choose two.)

- A.** The SYSAUX is a temporary help tablespace for the system tablespace. It provides a central space for necessary additional metadata outside of the system tablespace. Some components and products that previously used the system tablespace now use the SYSAUX tablespace.
- B.** The most important purpose of the SYSAUX tablespace is to reduce the load on the system tablespace and additionally simplifying the administration.
- C.** The tablespace SYSAUX contains a predefined set of SAP tables. In the creation of the database, they are copied into the system tablespace in one step, instead of creating every table step by step.

D. The tablespace SYSAUX is needed by the installation tool SAPINST itself, and contains temporary Oracle dictionary information. It significantly reduces the installation time of the R3LOAD phase.

Answer: A,B

NEW QUESTION: 2

Which option describes how a network administrator prevents possible routing for VLSM subnets that are missing from the routing table?

- A. Create a route for the subnet to the null interface, and then redistribute the static route into the routing process.
- B. Create a route for the subnet to the null interface, and the routing protocol automatically injects it into its routing process.
- C. Create a loopback interface with the correct subnet, and then redistribute the connected interface to the routing table.
- D. Create a loopback interface with the correct subnet, and the routing protocol automatically injects it into its routing process.

Answer: A

NEW QUESTION: 3

Given the screenshot shown, choose the statement that accurately describes what is being seen by this protocol analyzer.

- A. The BSSID has been randomly generated.
