NEW QUESTION: 1

You are evaluating the implementation of data deduplication on the planned Windows Server 2012 file servers.

The planned servers will have the identical disk configurations as the current servers.

You need to identify which volumes can be enabled for data deduplication.

Which volumes should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

A. The CSV

B. E

C. D

D. C

E. DATA

Answer: B,E

Explanation:

* Scenario:

A mounted virtual hard disk (VHD) named DATA that is formatted NTFS

A simple volume named E that is formatted NTFS

* Note: Data Deduplication feature doesn't do everything in this version. It is only available in certain Windows Server 2012 editions and has some limitations. Deduplication was built for NTFS data volumes and it does not support boot or system drives and cannot be used with Cluster Shared Volumes (CSV). We don't support deduplicating live VMs or running SQL databases. See how to determine which volumes are candidates for deduplication on Technet.

Incorrect:

Not A: Volume C is a boot volume. Data deduplication does not work on boot volumes.

Not B: Volume B is FAT32 volume. Data deduplication requires NTFS.

Not D: Deduplication cannot be used with CSV.

NEW QUESTION: 2

Scenario: A Citrix Engineer deployed new iOS applications during an IT maintenance window. While existing iOS applications remain unaffected, users are reporting they have NOT received the recently pushed new applications.

What is the possible cause of this issue?

- A. The VPP license count has been exceeded.
- B. Enrollment ports have been blocked.
- C. APNS ports have been blocked.
- D. The connection between XenMobile Device Manager and App Controller is down.

Answer: C

NEW QUESTION: 3

In order to support rapid development, which one of the following principles must be applied?

- A. The architecture must provide a Rapid Application Development framework for user interface development.
- B. The architecture must provide guided development of the user interface without needlessly exposing the developer to implementation details.
- C. Usability best practices are incorporated into proven user-interface techniques.
- D. The architecture must provide access to the full implementation details of the interface in order permit maximum flexibility in the development process.

Answer: B

Explanation:

The architecture must provide rapid, guided development of the user interface without needlessly exposing the developer to

implementation details.

Reducing the time and resources required to deliver business solutions is required for IT to better support and align with business needs. Low level development is both time consuming and error prone.
