If you are looking for a discounted offer, **Exam CPQ-Specialist Objectives Pdf** then you are in good hands, With the advantage of simulating the real exam environment, you can get a wonderful study experience with our CPQ-Specialist exam prep as well as gain the best pass percentage.

NEW QUESTION: 1

Refer to the exhibit.

Which statement about the given configuration is true?

- A.** The timeout command causes the device to move to the next server after 20 seconds of TACACS inactivity.
- B.** The single-connection command causes the device to process one TACACS request and then move to the next server.
- C.** The single-connection command causes the device to establish one connection for all TACACS transactions.
- D.** The router communicates with the NAS on the default port, TCP 1645.

Answer: C

Explanation:

```
tacacs-server host host-name [port integer] [timeout integer]
[key string] [single-connection] [nat] The single-connection
keyword specifies a single connection (only valid with
CiscoSecure Release
1.0.1 or later). Rather than have the router open and close a
TCP connection to the server each time it must communicate, the
single-connection option maintains a single open connection
between the router and the server. The single connection is
```

more efficient because it allows the server to handle a higher number of TACACS operations.
