Explanation

The AWS Documentation mentions

AWS OpsWorks Stacks provides built-in support for Memcached. However, if Redis better suits your requirements, you can customize your stack so that your application servers use OastlCache Redis.

Although it works with Redis clusters, AWS clearly specifies that AWS Opsworks stacks provide built in support for Memcached.

Amazon OastlCache is an AWS service that makes it easy to provide caching support for your application server, using either the Memcached or Redis caching engines. OastlCache can be used to improve the application server performance running on AWS Opsworks stacks.

For more information on Opswork and Cache engines please refer to the below link:
