Buying our Advanced-Administrator practice test can help you pass the exam fluently and the learning costs you little time and energy, Guarantee 99% Passing Rate , One of the great Advanced-Administrator Exam Cost advantages is that you will soon get a feedback after you finish the exercises.

NEW QUESTION: 1
Which two OSPF network types support the concept of a designated router? (Choose two.)
A. NBMA
B. loopback
C. point-to-multipoint
D. point-to-multipoint nonbroadcast
E. broadcast
Answer: A,E
Explanation:
NBMA: simulates a broadcast model by electing a designated router (DR) and a backup designated router (BDR). There are two ways to simulate a broadcast model on an NBMA network: define the network type as broadcast with the ip ospf network broadcast interface sub-command or configure the neighbor statements using the router ospf command.

NEW QUESTION: 2
Computer evidence at a crime is preserved by making an exact copy of the hard disk. Which of the following does this illustrate?
A. System image capture
B. Chain of custody
C. Taking screenshots
D. Order of volatility
Answer: A
Explanation:
A system image would be a snapshot of what exists at the moment. Thus capturing an image of the operating system in its exploited state can be helpful in revisiting the issue after the fact to learn more about it.
Incorrect Answers:
A. Taking screenshots is akin to video and screenshots would be to capture all relevant screenshots for later analysis.
C. Chain of custody is observed to ensure that each step taken with evidence is documented and accounted for from the point of collection.
D. Order of volatility helps when dealing with multiple issues and volatility refers to the time that you have to collect certain data before that window of opportunity is closed because some data will exist longer than others.

NEW QUESTION: 3
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is

repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.
Your network contains an Active Directory domain named contoso.com. The functional level of the domain is Windows Server 2012.
The network uses an address space of 192.168.0.0/16 and contains multiple subnets.
The network is not connected to the Internet.
The domain contains three servers configured as shown in the following table.

Client computers obtain TCP/IP settings from Server3.
You add a second network adapter to Server2. You connect the new network adapter to the Internet. You install the Routing role service on Server2.
Server1 has four DNS zones configured as shown in the following table.

You need to ensure that when a computer is removed from the network, the associated records are deleted automatically after 15 days.
Which two actions should you perform? Each correct answer presents part of the solution.
A. Modify the Expires after value of the start of authority (SOA) record.
B. Modify the Time to live (TTL) value of the start of authority (SOA) record.
C. Create a scheduled task that runs the Remove-Computer cmdlet.
D. Modify the Zone Aging/Scavenging Properties of the zone.
E. Set the Scavenging period of Server1.
Answer: D,E
