NEW QUESTION: 1

What happens when you publish a goal?

- A.** It is added to the goal library for users to select.
- B.** It is available to workers in the Organization Goals area of the My Goals page.
- C.** It is available to workers in the Shared Goals area of the My Goals page.
- D.** It is added to the competency library.

Answer: C

NEW QUESTION: 2

Your company has an on-premises Bitbucket Server that is used for Git-based source control. The server is protected by a firewall that blocks inbound Internet traffic.

You plan to use Azure DevOps to manage the build and release processes

Which two components are required to integrate Azure DevOps and Bitbucket?

Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a deployment M group
- B. a Microsoft hosted agent
- C. a self-hosted agent
- D. service hooks
- E. an External Git service connection

Answer: C,E

Explanation:

When a pipeline uses a remote, 3rd-party repository host such as Bitbucket Cloud, the repository is configured with webhooks that notify Azure Pipelines Server or TFS when code has changed and a build should be triggered. Since on-premises installations are normally protected behind a firewall, 3rd-party webhooks are unable to reach the on-premises server. As a workaround, you can use the External Git repository type which uses polling instead of webhooks to trigger a build when code has changed.

NEW QUESTION: 3

Which two actions can you perform to integrate Azure DevOps and Bitbucket?

- A. Configure a self-hosted agent on the on-premises server.
- B. Configure a Microsoft-hosted agent on the on-premises server.
- C. Configure a service hook on the on-premises server.
- D. Configure an external Git service connection on the on-premises server.

Answer: D

NEW QUESTION: 4

What is the main function of ACP?

- A. It enables the automatic shelf ID assignment.
- B. It allows cabling the shelf to two additional controllers.
- C. It allows the controller to use Ethernet instead of SAS to fetch the storage data.

D. It allows the controller to nondisruptively reset the SAS expanders.

Answer: A
