If you are ready for Fortinet NSE6_FML-6.2 tests and going to take an exam cram or purchasing dumps pdf, why not consider our NSE6_FML-6.2 dumps vce, When others are fighting to improve their vocational **Valid NSE6_FML-6.2 Exam Topics** ability, if you still making no progress and take things as they are, then you will be eliminated.

Some people just complain and do nothing, As you can find that on our website, we have three versions of our NSE6_FML-6.2 study materials for you: the PDF, Software and APP online.

All these versions of our NSE6_FML-6.2 exam braindumps are popular and priced cheap with high quality and accuracy rate.

NEW QUESTION: 1

- A. Option D
- B. Option A
- C. Option C
- D. Option B

Answer: A

NEW QUESTION: 2

How do drug traffickers and other criminals use the fine art industry to disguise illicit proceeds?

- A. They use forged or fraudulent invoicing of priceless works of art by auction houses
- B. They use anonymous agents to buy the art and have the payment wired from offshore havens
- C. They immediately resell priceless works of art after purchase from a foreign auction house
- D. They commingle legitimate and illicit proceeds by principals for payment of fine art

Answer: B

NEW QUESTION: 3

You want to install the openldap software package to a new boot environment for testing before introducing the new software package to the production environment. What option describes the correct procedure to:

- 1) create a new BE named newBE
 - 2) install the software to that new BE only
- A. beadm create newBE beadm activate newBE pkg install openldap
 - B. pkg install --be-name newBE openldap
 - C. beadm create newBE beadm mount newBE /mnt pkg -R /mnt update openldap
 - D. pkg install --newBE openldap

Answer: A

Explanation:

Explanation/Reference:

Explanation:

If you want to create a backup of an existing boot environment, for example, prior to modifying the original boot environment, you can use the beadm command to create and mount a new boot environment that is a clone of your active boot environment. This clone is listed as an alternate boot environment in the GRUB menu for x86 systems or in the boot menu for SPARC systems.

When you clone a boot environment by using the beadm create command, all supported zones in that boot environment are copied into the new boot environment.

How to Create a Boot Environment

1. Become the root role.
2. Create the boot environment.

```
# beadm create BeName
```

BeName is a variable for the name of the new boot environment. This new boot environment is inactive.

3. (Optional) Use the beadm mount command to mount the new boot environment.

```
# beadm mount BeName mount-point
```

Note: If the directory for the mount point does not exist, the beadm utility creates the directory, then mounts the boot environment on that directory.

If the boot environment is already mounted, the beadm mount command fails and does not remount the boot environment at the newly specified location.

4. (Optional) Activate the boot environment.

```
# beadm activate BeName
```

BeName is a variable for the name of the boot environment to be activated.

On reboot, the newly active boot environment is displayed as the default selection in the x86 GRUB menu or the SPARC boot menu.
