NEW QUESTION: 1
John has scanned the web server with NMAP. However, he could not gather enough information to help him identify the operating system running on the remote host accurately.
What would you suggest to John to help identify the OS that is being used on the remote web server?
A. Connect to the web server with a browser and look at the web page.
B. Telnet to port 8080 on the web server and look at the default page code.
C. Connect to the web server with an FTP client.

D. Telnet to an open port and grab the banner.
Answer: D
Explanation:
Most people don't care about changing the banners presented by applications listening to open ports and therefore you should get fairly accurate information when grabbing banners from open ports with, for example, a telnet application.

NEW QUESTION: 2
What is the first step to isolate the problem if multiple clients' backups failed?
A. Check client error log files.
B. Query the Tivoli Storage Manager server activity log.
